

Simple Background info

Digital ID is an electronic collection of every physical identity document used to prove who we are online or in person without having to produce physical documents. All of our identity records in one location: driver's license, passport, state ID, social platforms, banking, medical records. It can include mortgages, cars, insurance, investments, pensions. Digital ID is built on blockchain technology. It can be stored on smart phones in an app or in a Google, Samsung, or Apple wallet. In addition to being a violation of our constitutional rights, it's a hacker's daydream. A life in one location is so much easier to steal. It is also a tyrannical government's greatest tool. China exerts control over its citizenry this way, everything in one location to freeze with a click of a button if a citizen steps out of line.

Programmable money refers to CBDC or stable coin. It has logic built into it and rules that govern how, when, where, and to whom money goes. It is different from the digital currency we currently use in credit cards, Zelle, Venmo, or Paypal. We freely choose where, when, and how we use them. Programmable money is connected to Digital ID and it is controlled by the same click of a button. Accounts can be frozen. A politically incorrect post can freeze a bank account or keep us from travel. We can be forced to buy fake meat if we consume our limit of real meat. If everything we do, purchase, and engage in online is tracked by Digital ID, and everything we transact is done with programmable money, our activity is tracked and freedom and privacy are destroyed. If we ban forced Digital ID, we kill the power of programmable money. You don't have one without the other.

Cash (or gold & silver) as Legal Tender keeps cash in circulation and gold and silver as legal tender. This is essential to protecting our freedom from a surveillance state that can turn off our money at whim. We watched this happen to the Canadian Truckers. We're watching assets being stolen and land grabbed in Canada now. But, what happens if the grid goes down? Programmable money relies on power. What happens in a weather event or power outage? Cash, gold, and silver as legal tender are the only way to maintain a free society and protect U.S. citizens
